

Meetinghouse A/V Wiring Installer Quick Sheet

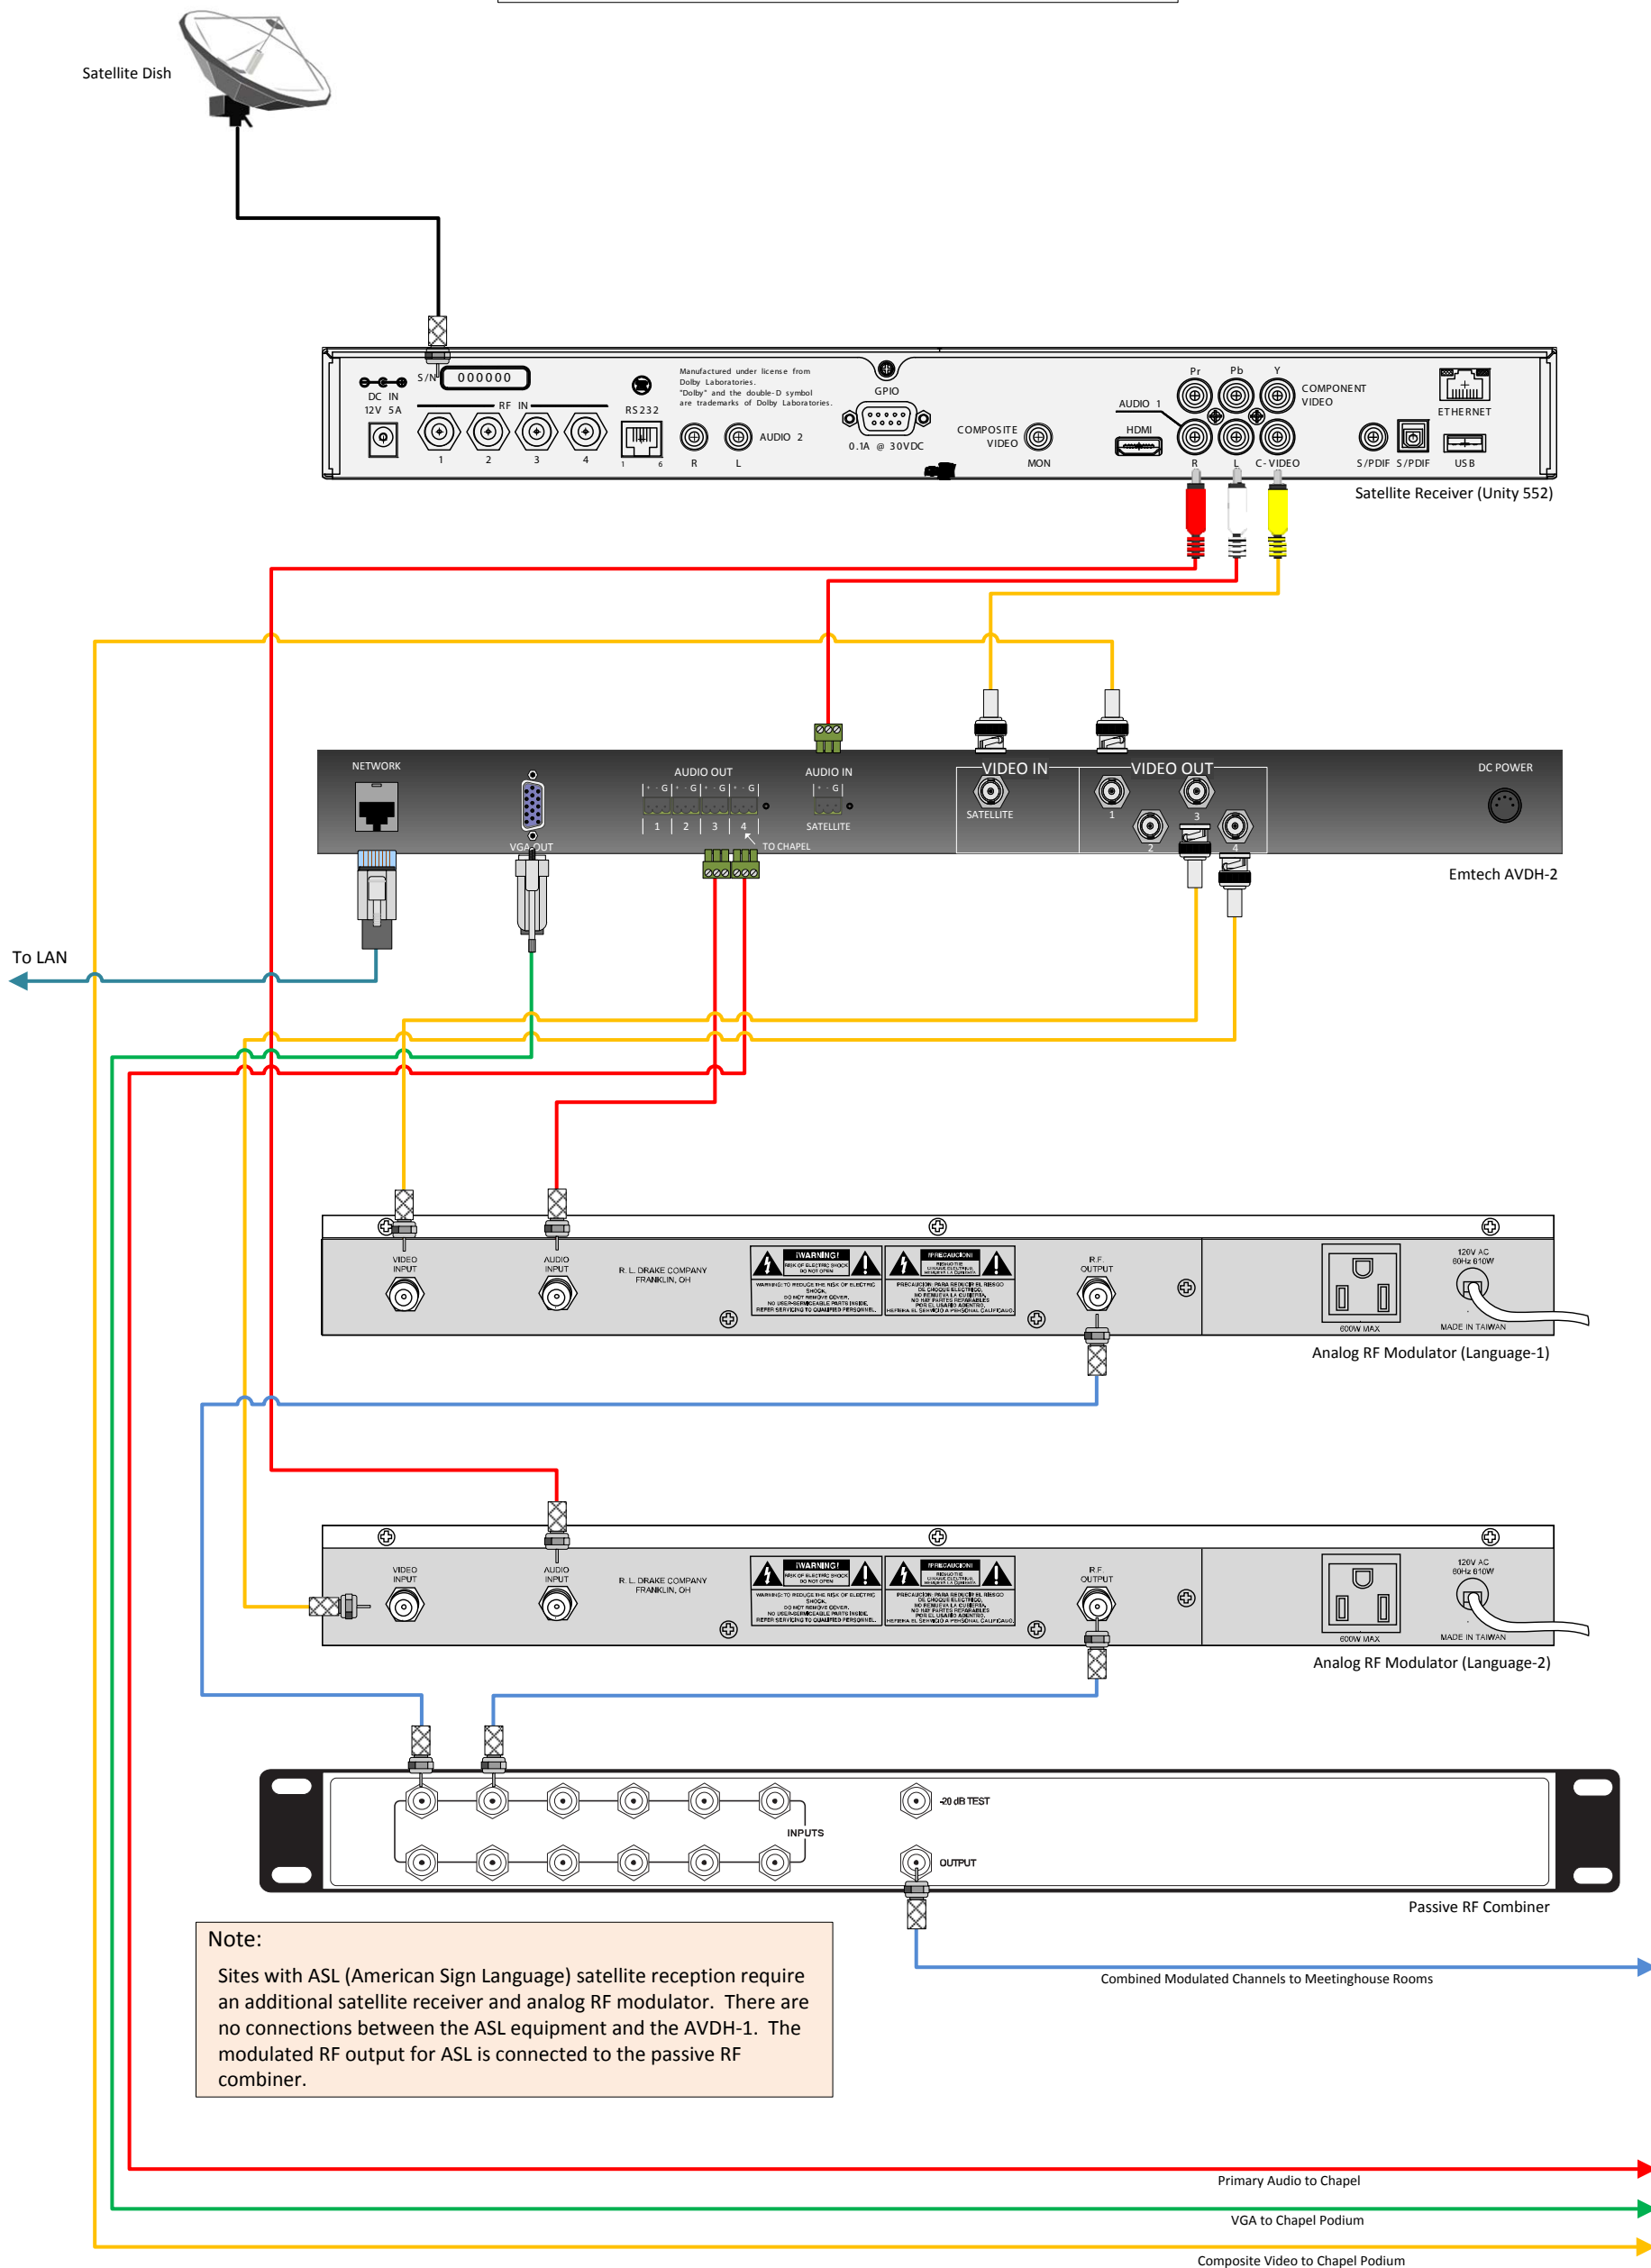

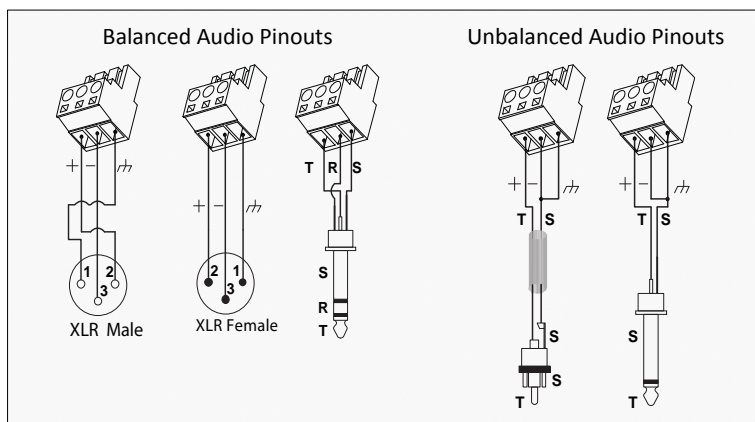

(Emtech AVDH-2)

4 February 2013

Note:

This represents a typical installation for a Webcast receive site. Your installation may vary.

Connections at the AVDH-2 are standardized for remote support purposes.

Note:

Sites with ASL (American Sign Language) satellite reception require an additional satellite receiver and analog RF modulator. There are no connections between the ASL equipment and the AVDH-1. The modulated RF output for ASL is connected to the passive RF combiner.
